Canvastic 3.0 is Free for All Technology Teachers and Schools as a Pilot for Two Months

Lafayette, CO March 5, 2007 – Canvastic LLC announces the continuation of the free offer for every technology teacher or technology committee chairperson everywhere. If a school employee has purchasing power for software or recommends the purchase of software for their school or district, they qualify for this pilot license of Canvastic.

We realize that having just one registered copy is hard to evaluate with students. To that end, we offer a free two month pilot program. Schools can install Canvastic on every computer they own and actually test it with every student for up to 60 days.

Qualified school employees can access this free offer by completing an on-line tour on the Canvastic web site: www.canvastic.com/techteacheroffer
Note: This URL must be accessed directly. The tour is not linked from anywhere else on the Canvastic web site. Please quote the URL carefully in any press placements.

Since this offer is for technology teachers and specialists in school employ, please do *not* publish this information into the retail market.

Canvastic is a student and teacher focused software tool that can be customized for students' age and ability level.  The interface is clean and clear with customized sets of options for graphic and text use. It grows with the user by presenting a customized interface dependent upon the student's level automatically.

Using Canvastic, students and teachers can write, graphically show, and present information in many different ways.  Tools allow for the creation of maps, diagrams, reports, and graphs, as well as importing of pictures and text.  The software provides for the integration of technology skills into any curriculum.

Version 3.0 continues and expands on the concept that software tools our students use to publish should be flexible. Teachers can customize their students' work environments even further than before. Dozens of new features, refinements and fixes are included in this release.

- Canvastic is now a Universal Binary application for use on PPC and Intel Macintosh computers.
- Canvastic now supports transparency and color tones in its graphics and text.
- Spell checking has become the best in the student publishing genre. Teachers can enable it or not. The "Learn" button can be enabled or not. Custom words and lists can be added then locked preventing students from corrupting the user dictionary.
- New brush shapes provide more artistic control but still keep the choices to a manageable level, which is a Canvastic signature philosophy.
- Digital photographs can be included easily, just use the new Open Folder... command and they come in, scale themselves to a useful size and are ready to be captioned and used.
- Templates, backgrounds and art that support curriculum standards have been amended.

About Canvastic LLC
Canvastic LLC is the coming together of two companies to develop and market the software Canvastic. FlatTop Technology, Inc. (FlatTopTechnology.com ) builds custom software applications for businesses in a wide variety of industries and was the lead technical developer of the Canvastic software. TeachTech Inc. (TeachTechColorado.com ) is a consulting firm founded by Steve Gandy that specializes in school and small office training and support. Full product information is available at: Canvastic.com.
